

gas is provided to the spraying means to assist the spraying at a constant rate.

7. (AMENDED) A device according to claim 1, characterised in that, in use of the device, liquid is pumped by the diluent pump (3) from the diluent container (1) as far as a diluent flow meter (4) and then introduced into the associated diluent regulation valve (5) before being introduced into the mixer (6);

- in that liquid is pumped by the or each additive pump (3) from the additive container (2) as far as a flow meter (4) for the additive and then introduced into an additive regulation valve (5) before being introduced into the mixer (6);

- and in that the mixture of diluent(s) and additive is sprayed by an injector (7) with a constant flow rate assisted by a flow of air (8).

8. (AMENDED) A device according to claim 1, characterized by several spraying systems (7) each able to be adapted to the throughput of solid product.
